# Apply Updates

## PAUSE. PATCH. PROTECT

Applying updates (a.k.a. patches) can seem like an unwanted chore or waste of time.

When you don't apply updates, it's like leaving the front door to your home open for thieves.

## Automate Your Updates

Let your devices do the work for you. Set up your devices to stay up-to-date automatically!

### Take some time to prevent the crime

Update all your computers, mobile phones, and tablets — at home and at Yale. Doing so can protect you, your family, your work, and your personal information.

**UPDATE**

Cybercriminals are looking for unpatched devices to steal your important information.

## Don't let them in!
